Welcome to The Bull Sale

JON & CAMILLE, SHELBY & BOW SCOTT
BOX 1541, CROSSFIELD, AB TOM 0S0
JON CELL: 403.333.1790 CAMILLE CELL: 403.369.1791

Its our pleasure to welcome you to our 8th Annual Bull Sale. It truly is our passion to raise top quality Black and Red Angus bulls and to see them out in your operations - there is nothing better! Its hard to say which time of year is our favourite ... calving time seeing all the baby calves and how the first time calvers turn out. Or weaning time seeing which calves weigh up the heaviest off grass.

We don't creep feed anything so its their natural growth potential. We truly enjoy attending our customer's & friends' brandings and pasture tours to see all their calves out of our bulls. That gives us great pride in what we're doing here. We are all working hard for the same end goal at the end of the day ... we want to live this way of life, raise our family with strong work ethic and with a little rain & luck ... hit our targets and put a few profitable dollars in our pockets. We are confident our bulls will do just that for you.

We don't push our bulls on heavy grain. Come tour the pen to see for yourself. We raise them up gradually because we don't want them to break down on you. We started working with the nutrition experts at Bullseye Feeds this year. They've helped us develop a customized nutrition plan to develop our bulls to last. We want our bulls to be athletic so they can work hard during your breeding season. We continue to challenge ourselves to bring you the best genetics that combines performance & growth, calving ease, disposition and sound feet. Our bull pen is made from high quality females. We strive for females in our herd that have a good solid foot, square udder, big hip, high performance and good temperament.

We are truly grateful for all our customers, family & friends support. Stop by the farm anytime and take a look. The health and safety of everyone is important. Hand sanitizer and masks will be available. We have lots of room inside our heated sale barn for physical distancing. Bulls are penned outside with lots of room for you to view.

We look forward to seeing you on the 3rd Friday in March.

WARRANTY & GUARANTEE

In our opinion, every purebred breeder has an obligation to stand behind their bulls to be guaranteed breeders. We would not be in business if we didn't stand behind the bulls we sell. Not only do we follow the guidelines of the breeders guarantee as outlined by the Canadian Angus Association, we go above and beyond. If you are ever not satisfied with your purchase, please give us a call. Every situation is different but our promise to you is we will work with you and we will stand behind our bulls. Accidents & injuries happen ... its just part of the business. We want to support our customers. This year, we are offering to cover 10% of your insurance premium.

SVR Distinct was a feature bull in South View's 2019 bull sale. He is a big stout bull with lots of body capacity. He has added a lot of thickness which shows right at birth!! He has a near perfect foot on him. He is one of the best Red Angus bulls we've bought. Distinct is now a 3 year-old bull and looks just as good as the day we bought him!

Harvestor will add length of body with added muscle, spring of rib, depth and a great disposition. We selected Harvestor out of the 2018 Leeuwenburgh Bull Sale as the \$50,000 high selling bull. He is packed with natural thickness with dimension and bone. He will add length of body and good foot structure. Harvestor has a pedigree that blends fresh outcross genetics with proven maternal greatness of bulls like Rob Roy, New Trend and Masterplan.

AngusONE
 Genetic Evaluation

The EPDs listed in this sale catalog are the product of the Canadian AngusONE Genetic Evaluation, calculated in partnership with the American Angus Association. Therefore, EPDs for Canadian Red Angus, Canadian Black Angus, and American Black Angus animals are directly comparable to each other. EPDs are values that predict how the future progeny of an animal will perform relative to the progeny of other animals in the same breed, expressed in the units of that particular trait. For example, weaning weight is measured in pounds thus the WW EPD is expressed in pounds. Another way to look at it is EPDs measure an animal's value as a parent.

EPDs are based on pedigree information and performance data such as weight information and are then compared to other animals within a contemporary group. The different traits are adjusted to a standard age to ensure that all animals are equal when compared. The right EPD for you will depend on your cow herd, your management and your breeding goals. For more information on using EPDs please contact the Canadian Angus Association, at 1-888-571-3580.

We have been impressed with this calf since birth! We were super excited when the dam 577B had a bull calf last year. 16H has developed into one of the top bulls in our offering. He has a good solid foot, lots of spring of rib, and easy doing. His Dam has a Canadian bloodline pedigree with genetics out of some great herds.

A brother sold to Howard & Allison Ness and Justin & Karla Randall.

The Brand You Can Trust

ABOUT SSF BRANDING

This is our 2nd year freeze branding. We hope it makes it easier for our customers to identify their bulls.

"SSF" branded on Right Hip and the bull's ID branded on Left Hip. The "0" represents year born - 2020.

SELECTING THE PERFECT HEIFER BULL AT SSF

Proper heifer bull selection is absolutely crucial. Calving problems of any kind are costly in man hours and financially to the livestock producer. The most accurate information available to select a herd bull are EPDs (Expected Progeny Differences). EPDs are science-based facts and figures calculated by a breed association based on actual weights submitted by breeders.

The majority of SSF heifer bulls are from A.I. sires with high accuracy numbers for calving ease. SSF follows a stringent selection process when selecting sires for calving ease in our own herd. SSF follows this process so we can guarantee easy calving bulls based on factual information to our customers.

Reserve is an impressive looking herd bull that will sire docile, eye catching females and bulls with tremendous shape, depth of body, excellent fertility and real world efficiency. We have first calf heifers calving that have nice udders and are on track to making great mother cows. Reserve adds a lot of depth of body and muscle. An easy doing bull with a great temperament.

Blacksmith was the \$24,000 high selling bull in the 2017 National Western Angus Bull Sale. He is deep in his ribcage and thick rumped with an exceptional genomic profile. His grandam is a full sister to the \$110,000 S A V Resource 1441; his third dam is among the highest income producing donors in the entire Angus breed. A calving ease sire with exceptional growth from birth to WW & YW; bonus is his high docility score. Blacksmith has a lot of eye appeal, muscle expression and thickness. Calves are born light with rapid growth.

Seedstock has lots of dimension and thickness. Top maternal traits on both sides of pedigree - he is a great female maker. Excellent foot quality and structural correctness.

EPD DEFINITIONS

EXPECTED PROGENY DIFFERENCES

EPDs are an estimate of how future progeny of each sire can be expected to perform in each traits listed.

BW: Birth Weight EPD - expressed in pounds, is a predictor of a sire's ability to transmit birth weight to his progeny compared to that of other sires.

WW: Weaning Weight EPD - expressed in pounds, is a predictor of a sire's ability to transmit weaning growth to his progeny compared to that of other sires. Weaning weight is an indicator of growth from birth to weaning (205 days of age). The calf's growth during this period is influenced by its own ability to grow plus its mother's maternal abilities.

YW: Yearling Weight EPD - expressed in pounds, is a predictor of a sire's ability to transmit yearling growth to his progeny compared to that of other sires.

MILK: Milk EPD - is an indicator of milking ability in daughters. It represents the differences in weaning weights of calves due to the amount of milk produced by their mothers. It is expressed in pounds of calf weaned.

CE: Calving Ease Direct - predicts the percentage of unassisted birthings expected from an animal's calves. This EPD reflects a combination of gestational growth and a calf's conformation. The higher the Calving Ease EPD, the more likely it is that the animal's calves will be born without assistance.

77 lbs.	669 lbs.	-0.7	+52	+95	+28	+10.0

Out of a bigger framed cow with added length of body. She weans off heavy calves and breeds back early no problem. Her first calf was a bull and he had an actual weaning weight of 1,025 lbs. He sold to Mike Stephenson. Average weaning weight ratio on her 4 calves is 122. 54H will be a top quality, easy calving, safe for use on heifer bull whose calves will have lots of growth and performance.

In Memory of Kathy Earl

*Sadly, this past year we
lost an amazing lady,
wife of 28 years to Cody &
mother to Chase & Kady.
Kathy was a warrior as she
battled cancer for 4 years.
Kathy will be missed by many.*

*It's OK to have multiple
irons in the fire . . .
As long as the fire is hot enough!*

WE ARE **FIRED UP** TO BE ADDING
CHAROLAIS TO OUR PROGRAM

Watch for SSF Charolais Bulls in next year's sale!

Our Charolais Story

Three years ago we starting thinking about how we wanted to expand our purebred operation. After much research, we made the decision to diversify by adding another breed.

We first contacted Helge By, a long time dedicated promoter of the Charolais breed. Helge hardly hesitated when we asked which Charolais herds we should approach ... he straight away recommended we call Andre Stepler from Miami, Manitoba. Stepler Farms are celebrating their 100th year of farming and 47th year in breeding Canadian Made Charolais genetics. They run 600 purebred Charolais cows. With this many cows, we knew their cows wouldn't be babysat.

We have been very impressed with the 70 females we purchased. They have calving ease, good square udders, and structurally correct. We are excited to see them develop and perform.

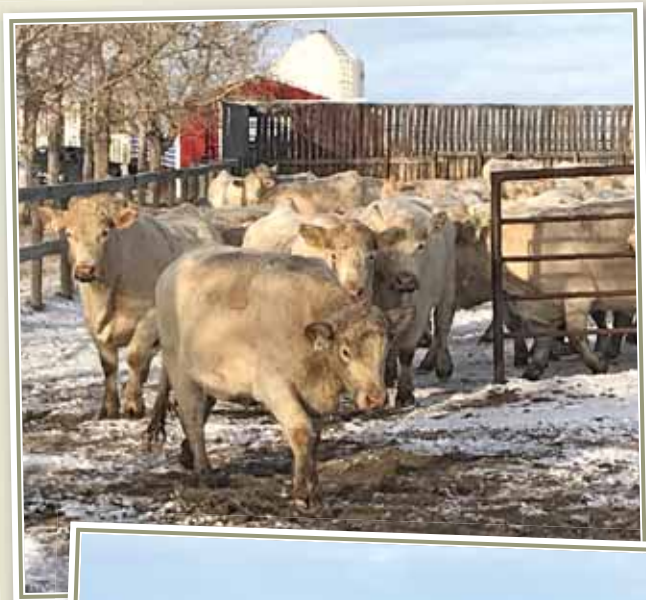

When thinking of crossbred commercial cattle there is nothing better than a thick silver steer calf or a sweet tan heifer calf.

In our opinion, Angus will always be THE Maternal Breed. They are the mother cow makers.

Charolais have been called the "performance pioneers". We want to offer our bull buying customers options both on the maternal and terminal genetics.

And we are excited to bring this opportunity.

Our son Bow was extremely excited and jumped on the idea of this new venture right away. Shelby was a little more concerned that her parents were having a mid-life crisis at first ... but now she is 100% invested and even put skin in the game and bought her own Charolais heifer calf!

Welcome to the Scott Stock Farm 2021 Bull Sale!

Everyone at Didsbury Vet Services is proud to be involved in the herd health program at Scott Stock Farm. All cattle on the farm are part of a vaccine, deworming and breeding soundness protocol, which sets these bulls up for success on the farm and at their future homes.

Lifelong health of these bulls is a priority at Scott Stock Farm and this starts with their hardworking mammas. The cows are on an annual killed vaccine program to ensure each dam has a robust immunity and their colostrum is loaded with antibodies for the calves as they hit the ground. At fall preg checking all cows receive a killed IBR/BVD vaccine, 8 way Clostridial vaccine, and Scour Bos 9. Topical ivermectin is applied at this time to establish internal and external parasite control.

All calves receive vaccines to prevent respiratory disease and Clostridial infections to allow them to reach their maximized growth. This modified live calf vaccine protocol involves Bovi-Shield Gold One Shot (IBR, BVD, PI3, BRSV, and Mannheimia) and Ultrabac 7/Somubac (Clostridial diseases and Histophilus). Calves first receive these vaccines at pasture turn out in the spring and are boosted again right before weaning in the fall. Internal parasite control is established with LongRange which is given with spring vaccines. This product ensures the calves are free of internal parasites for up to 150 days, and sets them up to thrive throughout the winter.

Prior to the bull sale we perform a complete breeding soundness exam and semen evaluation of all bulls. Each bull is examined to ensure they are sound, have a strong confirmation, are in excellent body condition, and are free of any visible defects. The testicles, epididymis, and internal sex glands are palpated prior to semen collection. A scrotal measurement is performed to confirm all bulls meet minimum requirements for yearling Angus bulls. The penis is assessed during semen collection to verify each bull can protrude normally and they are free of warts or any other physical defects. Sperm motility and morphology are evaluated for each individual bull. Each bull is determined satisfactory or fit to breed if they pass their physical exam, scrotal measurement, sperm motility, and have 70% or higher in normal sperm morphology. If a bull does not meet the minimum requirements they will be deferred, which means they will be reassessed and confirmed to pass prior to leaving the farm at a later date.

The amount of hard work and care put into the health and wellbeing of cattle on Scott Stock Farm is extraordinary, and it is apparent in this excellent group of bulls. We are grateful to have a minor part in the production of these bulls and look forward to being involved in the future of the Scott Stock Farm herd. Please call Dr. Meg Verbeek or Dr. Andy Mencarelli at Didsbury Vet Services if you have any questions regarding the health program for these bulls.

It is a pleasure to be working with the Scott family at Scott Stock Farm. They have raised a great set of bulls for the 8th Annual Bull Sale, and the consistency in the bull pen is very impressive! The bulls at Scott Stock Farm are raised on a forage-based diet that maximizes their genetic potential and is balanced to promote lean muscle growth. The diet utilizes an organic mineral package to enhance the bull's immunity and growth pattern. It is important that rumen health stays a priority throughout every stage of the bull's development. The overall nutritional health and devel-

opment of the bulls and the entire cow herd are of utmost importance and continually evaluated to meet environmental and seasonal conditions. The cow herd also utilizes an organic mineral package throughout the year, which is essential to the bulls' overall health and longevity. If you have any questions about the nutrition of the sale bulls, please feel free to call. Best of luck on sale day!
